As a botanist, Robin Wall Kimmerer has been trained to ask questions of nature with the tools of science. As a member of the Citizen Potawatomi Nation, she embraces the notion that plants and animals are our oldest teachers. In *Braiding Sweetgrass*, Kimmerer brings these two lenses of knowledge together to take us on “a journey that is every bit as mythic as it is scientific, as sacred as it is historical, as clever as it is wise” (Elizabeth Gilbert). Drawing on her life as an indigenous scientist, and as a woman, Kimmerer shows how other living beings—asters and goldenrod, strawberries and squash, salamanders, algae, and sweetgrass—offer us gifts

lessons, even if we've forgotten how to hear their voices. In reflections that range from the creation of Turtle Island to the forces that threaten its flourishing today, she circles toward a central argument: that the awakening of ecological consciousness requires the acknowledgment and celebration of our reciprocal relationship with the rest of the living world. For only when we hear the languages of other beings will we be capable of understanding the generosity of the earth, and learn to give our gifts in return.

China is currently making a massive effort to educate its workforce in a formal and structured system. A good deal has been written about China's attempts, since 1949, to eradicate illiteracy and to universalise primary and secondary school education but the subject of this book is an educational system established to meet the needs of those already employed, whether in government, industry or agriculture. Two study teams, sponsored by the International Council for Adult Education, visited China in 1981 to explore this educational phenomenon. Their findings, updated by subsequent ICAE visits and enriched by further reading, form the basis of this book. This is the story of the Chinese experience of developing adult education. It will be valuable to those involved in extending education in the industrialised world.
